- MongoDB

Personal Skills

- Communication
- Problem Solving
- Self Motivated

About

I'm a self-taught, full-stack developer with 6 years of experience. I have a passion for all things software, with my primary focus being system architecture and the development of distributed systems. My main drivers are ensuring system scalability, maintainability and reliability through good design and coding practices.

Employment

Lexicon

Development Lead (May 2021 - Present)

Tech: Go, Node.js, React, AWS, Kubernetes, Docker, MySQL, Redis, gRPC

- Spearheaded the design and development of a robust system responsible for generating monthly activity statements, catering to an extensive user base of over 250,000 individuals.
- Led cross-functional teams in the conceptualization, design, and development of cutting-edge Micro Frontends for a prominent player in Australia's insurance industry. Streamlined backend processes and enhanced efficiency by introducing a shared common library, promoting consistent development practices across multiple teams.
- Mentored and guided a team of four dedicated developers, fostering a collaborative environment and facilitating their professional growth. Offered insightful guidance and hands-on support to elevate technical proficiency and project delivery.
- Successfully organized and managed a Competitive Programming club within Lexicon, fostering an environment of continuous learning and skill enhancement. Provided invaluable guidance to developers in mastering intricate data structures and algorithms through engaging weekly questions, competitions, and comprehensive tutorials.

ClimateClever

Software Engineer (Jul 2019 - May 2021)

Tech: Node.js, React, AWS, Docker, MongoDB

- Orchestrated the seamless sharing of components across multiple web applications by skillfully implementing Bit.dev, streamlining development and promoting code reusability.
- Integrated local storage into web applications through Redux, enhancing user experience and data management with efficient state management practices.
- Led the end-to-end implementation of Continuous Integration and Continuous Deployment (CI/CD) pipelines for microservices, leveraging Docker and AWS CodePipeline technologies to optimize development workflows and ensure robust software delivery.

AppsPeople

iOS Developer (Mar 2017 - May 2019)

Tech: Swift, Firebase, Realm, React, Node.js

- Contributed to diverse projects, exhibiting proficiency in developing iOS applications using Swift, crafting dynamic web applications with React, and architecting efficient backend APIs using Node.js.
- Applied a strategic approach to enhance performance and user experience, including refactoring multiple View Controllers and skillfully implementing prefetching mechanisms for asynchronous data loading in tableViews. This optimization resulted in seamless 60fps scrolling, elevating the fluidity of user interactions.

Education

I am a self-taught Software Engineer who learned to code whilst studying Physical Education at university, I uncovered my passion for software and began teaching myself. Since then I've stayed up to date with the latest technologies and advanced my skill set through reading books, listening to podcasts, watching tutorials, completing certifications, and attending meetups and workshops.
